

```
import React, { useState, useEffect } from "react";

const SearchComponent = () => {
  const [query, setQuery] = useState("");
  const [debouncedQuery, setDebouncedQuery] = useState("");

  useEffect(() => {
    const handler = setTimeout(() => {
      setDebouncedQuery(query);
    }, 500);
    console.log(query, handler)

    return () => clearTimeout(handler);
  }, [query]);

  return (
    <div>
      <input type="text" onChange={(e) => setQuery(e.target.value)} />
      <p>Searching for: {debouncedQuery}</p>
    </div>
  );
};

export default SearchComponent;
```
