

Write a function `rotate_matrix` that takes an $n \times n$ matrix (a list of lists) and rotates it 90 degrees clockwise. The function should modify the matrix in place.

Constraints:

The matrix is guaranteed to be square (i.e., the number of rows is equal to the number of columns).

You are not allowed to use any third-party libraries.

Example: Rotate to the right by 1

Input Matrix

```
1 2 3
4 5 6
7 8 9
```

Output Matrix

```
7 4 1
8 5 2
9 6 3
```

Average Waiting time to serve

```
function rotateMatrix(matrix) {
    const n = matrix.length;

    // Step 1: Transpose the matrix
    for (let i = 0; i < n; i++) {
        for (let j = i; j < n; j++) {
            [matrix[i][j], matrix[j][i]] = [matrix[j][i], matrix[i][j]]; // Swap elements
        }
    }

    // Step 2: Reverse each row
    for (let i = 0; i < n; i++) {
        matrix[i].reverse();
    }

    return matrix;
}
console.log(rotateMatrix([[1,2,3],[4,5,6],[7,8,1]]))
```
